Level Design Assignment

CS:GO Counter-Way Design

A school project where the primary aim was to create a well balanced level in Counter Strike: Global Offensive, based on existing level design fundamentals of the game.

Key proficiencies:

Sketching

Valve Hammer Editor

Design Process

Gameplay research	Classic map breakdown	Idealism sketches	Map construction

Category research included a play session and breaking down the gameplay systems to notice and account for when designing the new level.

Step 2 Next, I did a complete gameplay and more breakdown of DUST 2 , a classic level design example to build off of. In the following image, the simplified breakdown is built back up to create a new map design.

Primary Gameplay elements

- Roundbased Gameplay
- Two teams, Terrorists & CT's
- 4 game Economy Management
- Bomb Defusal Objective
- Teamwork and coordination between team members
- Skill based gameplay, with a low barrier to entry, but mastery to determine winner in a variety of game modes including Death Match, Hostage Rescue and Bomb Defusal. Bomb defusal objective was the most iconic game mode to the series.

Level Design Breakdown
SPAWN POINTS

CT SPAWN

Long A, The CT uses his free pistols to run down the long A path. Many locations are towards the back of the CT spawn, such as the long A doors and the pit area.

Short A, CT players may also spawn in short A, which is a direct path to the A site. Offers a position to view the A-B tunnels, near the CT ramp or the Connector.

B, The CT side has two potential spawns. Either through the B Tunnels, or the B Window. Both offer a direct B site entry.

T SPAWN

Tunnels, The T team has two possibly spawn locations, through the A or B tunnels. These guards can then choose to run down the tunnels, or push through the tunnels leading to the B locations.

Upper T Spawn, Upper spawn is there to provide a safe spawn for the T team. This spawns are close to the double doors to A site, and the Connector, allowing for a quick entry into the A site.

Long Doors, The T team also has three spawns near the long doors. Two on the T side of the map, and one on the CT side to provide quick access to long A or mid.

KEY NOTES

1. Spawn point positions near Tunnels have been crowded to support point B rushing strategies.
Alternately, CT Players spamming near the Long A doors can be easily flanked by Terrorists or set up for a B rush.

2. Players spawning near the middle area can potentially reach mid quicker to challenge control of mid, or potentially back to long range interactions.

3. Most long A interactions focus greatly on flanks/ generates to create safe passage points for terrorists to push through

Level Design Breakdown
CHOKE POINTS

Mixed Tunneling approaches to A site

CT CHOKE POINTS

Extreme Narrowed access points

T CHOKE POINTS

Wide Design spaces for T

KEY NOTES

1. Primary conflict resolution behavior- Gunplay

2. **CT side interactive parameters-**
- Long A doors
- Tunnels
- Connector/ Catwalk
- **T interactive parameters-**
- Long A doors
- Long Tunnels
- Upper T Spawn
- Tunnels & Connector, Mid Approach

3. Circle point additions suggestions-
Risky Collapsed Tunnel Area in Figure B
(For quicker rotations or side point of T interior, high risk high reward)

Level Design Breakdown
NADE ZONES

NADE ZONES

Mid Doors, Players often throw smoke grenades to block the A site sight through the mid doors, denying information and movement to the A site, setting up a challenging for CT's.

Long A, Smoke grenades are commonly thrown at the CT ramp, to block the CT entering a site and preventing the T's view of denying the CT's vision.

A Ramp, Players will frequently use smoke grenades to block the A Ramp Tunnels, which can be a common entry point for CT's to take a defensive position by the T's.

Level Design Breakdown
BOMB SITES

SITE A

The A bombsite on Dust 2 is located towards the right side of the map, and is relatively small in size. Most of the A site is surrounded by the Short A and Long A doors.

Cover in A
- **Long A**
- **Pit, Mid Doors CT Ramp**
- **Short A, Mid to Short A**

CT defensive points
- **A Ramp**
- **Site**
- **Cross platform at Short A**

Fig. SITE A

SITE B

The B bombsite on Dust 2 is located towards the left side of the map, and is relatively large in size.

T Entry points
- **B Tunnels**
- **Upper B**

CT Defensive points
- **Site, Tunnels, Ramps**
- **Window**
- **Doors**

Fig. SITE B

KEY NOTES

1. Creating cutaway corridors towards entry points, to create a sense of safety and to allow defensive/ push team structure from defensive positions near choke points and bombsites.

2. It is favorable to build vast positions towards on counter team communication.
Ex. Mid doors to Tunnels and Long A doors to A site.

3. Mid, Difference in gameplay for terrorists and counter terrorists, Terrorists have to use the cramped tunnels in a game objective. CTs both exit different doors after spawn, to allow for a quick rotation to bombsites. This creates each team to approach each site from a better vantage.

Visual Moodboard

Keywords:

1. Bunker
2. Dilapidated
3. Abandoned

Sketches

Deconstruction of Dust 2

Initial map sketch

Final Map Design

Map name: Bunker

A final sketch prepared below to determine the entry points, potential choke points and nade zones building from. This sketch was treated as a preliminary idea, many spaces were later deemed unnecessary and the entire engagement space more optimised around vertically , which was the primary approach to the engagement of the proposed level.

Sketch showcasing level interconnectivity

In game shot of Balcony point 1

In game shot of Balcony point 2

I handcrafted every part of this map keeping **vertiuality** in mind. Unlike the usual linear design language of most bomb based designs, this area is spread out over three floors in a bunker. The area is designed in a way that it has multiple flanking routes, multiple engagement points and multiple areas to control. This gameplay structure and unique gameplay logic is meant to be unlike any other CS:GO map.

The unique gameplay flow mentioned is further strengthened by the central balcony choke point in the arena where all the floors open up to give a high amount of visibility across different floors. This allows for **area control, enemy position tracking and manoeuvring in emergency situations.**

bomb passage connecting 1st T side exit bomb site B. Aim is to allow for CT rotations. stairs.

CT Spawn area connecting to office and CT

Site A

Site B

Bombsite Gameplay distinctions:

Site A

Entry points: 2
Cover:
Short range combat zone
Average time taken to reach:
CT: 22 s
T: 15 s

Site B

Entry points: 3
Cover:
Main range combat zone
Average time taken to reach:
CT: 11 s
T: 23 s

Mid-Map Features:

1. **Verticality**. The level was divided into three floors stacked atop one another with a central balcony section which would be important to hold for teamwork strategies. Bomb sites keeping the previous point in mind, the bomb sites were laid on top of one another while also being connected through a central balcony.

2. **Area control**. Having access to areas like the Upper/lower CT/T bomb site, where players can spawn for the terrorists, to view and survive the holding team. Meanwhile, the CT's can spawn for the terrorists to view and survive the holding team. Meanwhile, the CT's can spawn in the upper B tunnels to form a form of segmentation to engagement spaces making it harder for the T side to control.

3. **Choke points**. A major staircase connecting all floors nearer to the CT side makes it an important choke point for the CT to hold. Also, a long side entry to the CT bomb site makes it an important chokepoint to hold.
